(54) CONTROLLER FOR SYNCHRONOUS MOTOR

(57)Abstract:

PURPOSE: To correct positional shift of rotor being detected automatically when vector control is carried out by detecting rotor position of a synchronous motor.

CONSTITUTION: The controller for synchronous motor comprises means 22 for detecting d-axis voltage of a synchronous motor 2, and a position operating means 5 for detecting no-load state from the current of the synchronous motor and outputting a position signal representative of rotor position corrected by d-axis voltage under no-load.

LEGAL STATUS

[Date of request for examination] 20.01.1998

[Date of sending the examiner's decision of rejection] 19.10.1999

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
